DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/10/2004 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Cao et al (US 6,295,396 B1).

Cao et al reference was cited in the information disclosure statement filed 10/15/2003.

Cao discloses an optical device with all the limitations set forth in the claims, including: a dispersion compensator ('dispersion compensating fibers' or 'DCF's'- column 2 lines 24-26) to receive multiplexed light (column 2 lines 5-6) and to disperse the received multiplexed light at a predetermined dispersion value (column 2 lines 47-53); a first reflecting and transmitting device, coupled to an end of the dispersion compensator which does not receive the multiplexed light

(column 2 lines 47-53), to reflect light having a specified wavelength and to transmit light having a wavelength other than the specified wavelength so as to demultiplex the wavelength light from the multiplexed light (column 2 lines 36-43: since the Bragg grating reflects only selected wavelengths, it inherently 'demultiplexes' the transmitted multiplexed optical signal), wherein the light having the specified wavelength is reflected through the first reflecting and transmitting device such that the light having the specified wavelength passes through the dispersion compensator a plurality of times (column 2 lines 47-53: the light passes through the dispersion compensator at least 2 times).

Regarding claims 3 and 4, each of the Bragg grating of Cao may be also referred to as an "optical filter" or a "filtering unit" since it selectively transmits optical signal of predetermined wavelength range. Therefore, the claimed recitations of claims 3 and 4 are also anticipated by Cao reference.
